

Flow Set Point Switching – RFS Types

C

- Combines visual confirmation of flow with dynamic, electronic switch operation
- Easy, adjustable switch point calibration: a local LED signals when set point is reached

RotorFlow® Switches build an extra level of reliability and protection into your equipment. By principle of operation, the rotor cannot be deceived into indicating a positive flow situation when no flow actually exists. Once set to a desired actuation point, RotorFlow will switch to a "no-flow" condition should the rotor stop for any reason.

Typical Applications

Protect expensive electronic equipment from coolant flow failure on...

- Semiconductor
- **Processing Equipment**
- Lasers
 Medical Equipment
- X-Ray and Other High Power Tubes
- Robotic Welding Equipment

FLOW SENSORS – ELECTRON

Switch Set Point Calibration With LED Signal (RFS Type)

With the unit installed in the line and power supplied, complete the following steps to calibrate switch actuation point with proper flow rate. A small flat-blade screwdriver is the only tool required.

- 1. Adjust liquid flow in the line to the rate at which switch actuation is desired.
- 2. Insert screwdriver into opening on backside of housing and fit blade into the potentiometer adjustment screw inside.
- 3. If LED is not illuminated, slowly turn screwdriver counterclockwise and stop as soon as LED illuminates.
- If LED is illuminated, turn screwdriver clockwise until LED light goes out. Then, slowly turn screwdriver counterclockwise and stop as soon as LED illuminates.

How To Order

Specify Part Number based on desired body material, port size and input power rating.

Body	Port Size	Flow Ranges – GPM		Input	Part
Material	NPT	Low Range*	Standard Range	Power	Number
	.25″	0.1 to 1.0	0.5 to 5.0	24 VDC	155425 🗲
Polypropylene				115 VAC	155876 🗲
готургоруюнс	.50″	1.5 to 12.0	4.0 to 20.0	24 VDC	155485 🗲
				115 VAC	155886 🗲
	.25″	0.1 to 1.0	0.5 to 5.0	24 VDC	156265 🗲
				115 VAC	156266 🗲
	.50″	1.5 to 12.0	4.0 to 20.0	24 VDC	156268 🗲
Brass				115 VAC	156269 🗲
	.75″	_	5.0 to 30.0	24 VDC	180395 🗲
				115 VAC	180396 🗲
	1.00″	-	8.0 to 60.0	24 VDC	181688 🗲
				115 VAC	181689 🗲
	9/16-18**	0.1 to 1.0	0.5 to 5.0	24 VDC	165073 🗲
				115 VAC	165074
Stainless			4.0 to 20.0	24 VDC	165077 🗲
Steel	.50″	1.5 to 12.0		115 VAC	165078 🗲
	.75″	_	5.0 to 30.0	24 VDC	181691
				115 VAC	181692
	1.00″	_	8.0 to 60.0	24 VDC	181693
				115 VAC	181694

* With use of Low Flow Adapter supplied. See Page F-8 for more information.

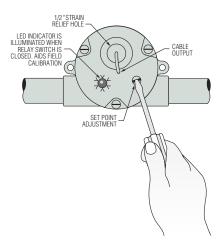

** Straight thread with O-ring seal.

Special Requirements:

GEMS caters to OEM needs with special configurations for potable water and enhanced chemical capabilities. Consult factory for further details.

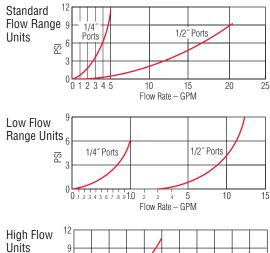

For higher pressure/temperature ratings, stainless face plates are available. Consult factory.

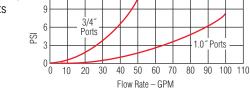

High Resolution Black Rotor PPS composite. Each of the six rotor arms is magnetized. A PTFE loaded bushing ensures long life.

Pressure Drop-Typical

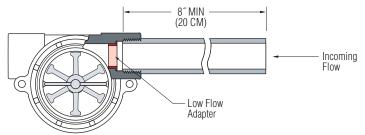

Easy Installation and Maintenance

A proper installation will enhance RotorFlow sensor performance. Install using standard pipe fitting tools; horizontal fluid lines are recommended. For further installation and maintenance recommendations, refer to one of the following instruction bulletins: RFO Types–Part Number 157258; RFI Types–Part Number 157259; RFS Types–Part Number 157261.

Since their function is to monitor dynamic fluid flow, naturally the rotor will react to turbulence, pulsation, entrained air, and other flow anomalies induced in the flow stream by other process hardware. For optimum performance, install RotorFlow units where nominal flow conditions exist with ports located at the top. Incoming flow may be placed to either port; a minimum of 8 inches (20 cm) of straight pipe on the inlet side is required. When operating in the low flow range, the supplied Low Flow Adapter must be installed in the incoming port.

Except for straight-thread versions, RotorFlow sensors connect to piping via NPT mating thread forms. The use of an appropriate thread sealant is necessary to assure a leak-tight connection. Permatex "No More Leaks[®]" or 2 wraps of Teflon[®] tape are the only sealants recommended for GEMS flow sensors. Straight-thread versions require an O-ring for sealing.

150 micron filtration is recommended. However, should foreign particles enter the RotorFlow sensor, accumulation is easily cleared by removing the lens from the body. The lens is removed by turning its 7/16" hex center hub 45° counter-clockwise with a standard socket wrench. To reinstall the lens, simply reverse the process. Pressure must be relieved from the system prior to sensor clean-out. O-rings should be lubricated prior to re-assembly.

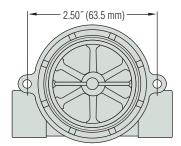

Low Flow Applications

A low flow adapter is supplied with all Rotorflow units. It is used to produce accurate response at low flow rates. Install the adapter, as shown above, in the port selected for incoming flow.

Panel Mounting

Plastic Bodies. Two (2) mounting ears are provided at the body center line to receive #8 self-tapping screws to accommodate panel mounting of the plastic RotorFlow units. Note: ANSI T type 23 self-tapping screws are recommended. They may be replaced with standard machine screws if re-installation should be required.

Brass and Stainless Steel Bodies. Two (2) mounting holes are provided on the body centerline, as shown below. #8-32UNC-2B screws are required for mounting.

RotorFlow[®] Maintenance Kits

Rebuild your RotorFlow $^{\otimes}$ Sensors and Switches in less than 5 minutes with one of these kits.

Includes:

- Ceramic Rotor Pin
- 6-Pole Magnetic Rotor with PPS/PTFE Bushing
- Buna N or Viton® O-Ring
- · Polysulfone Lens
